Exercise 1: Installation of VirtualBox and Creation of Virtual Machines

Aim

To install Oracle VM VirtualBox and create a virtual machine with a different operating system flavor (Ubuntu).

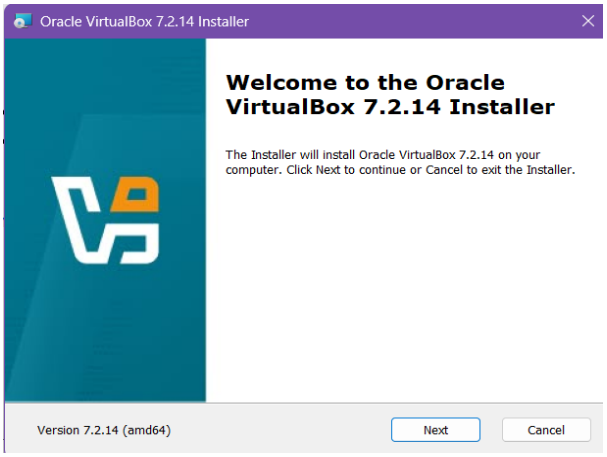

Prerequisites

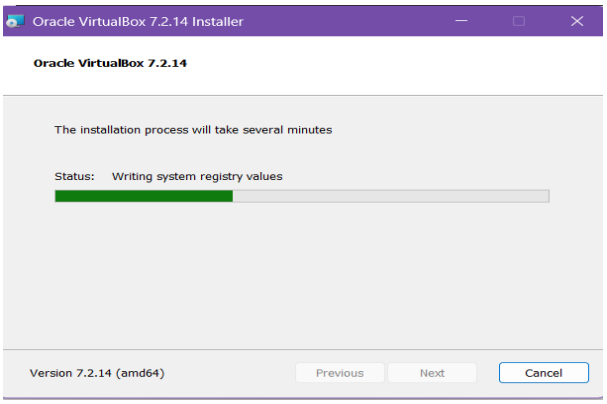

- Windows 10 Host Machine
- Oracle VM VirtualBox (Open Source)
- Ubuntu Desktop ISO image (Open Source)

Procedure

Step 1: Download Oracle VM VirtualBox

Navigate to virtualbox.org and download the Windows hosts installer. Run the installer using default settings.

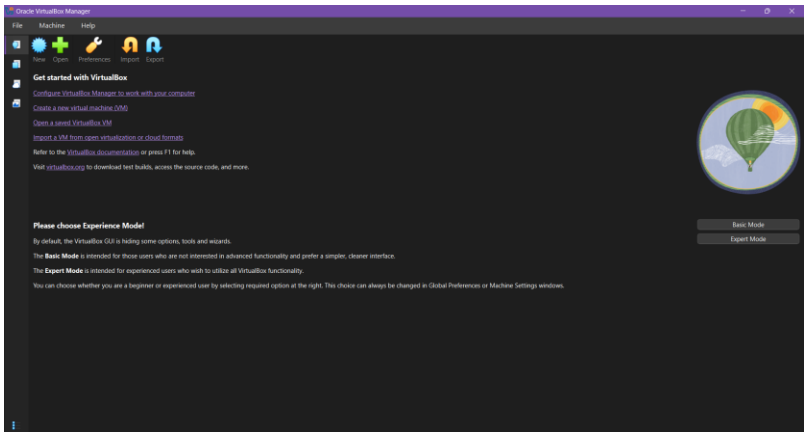

Step 2: Download Linux Image

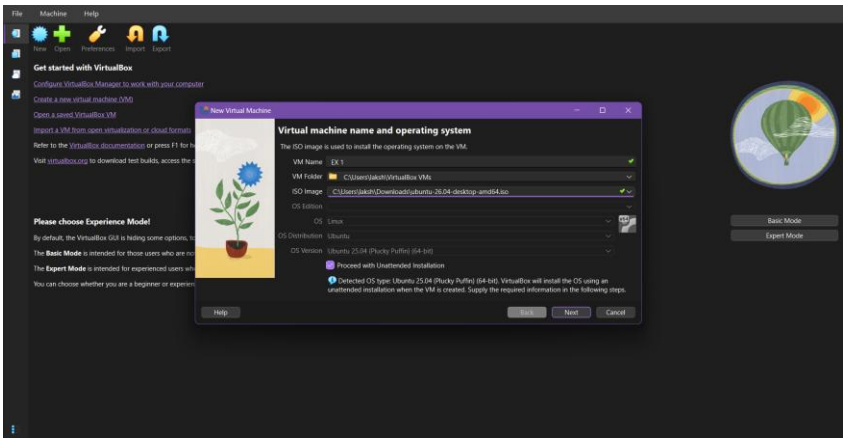

Download the latest Ubuntu LTS (.iso) from ubuntu.com/download/desktop.

Step 3: Create a New Virtual Machine

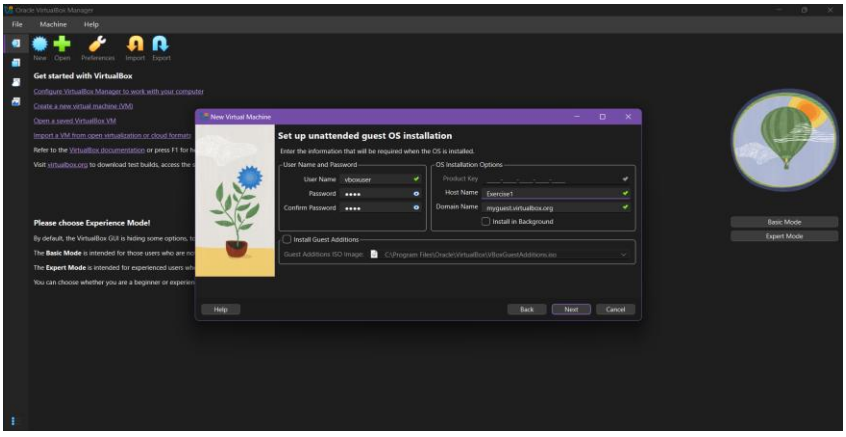

Open VirtualBox and click "New".

Name: "Ubuntu-Lab", Type: Linux, Version: Ubuntu (64-bit). Select the path of the Ubuntu ISO image.

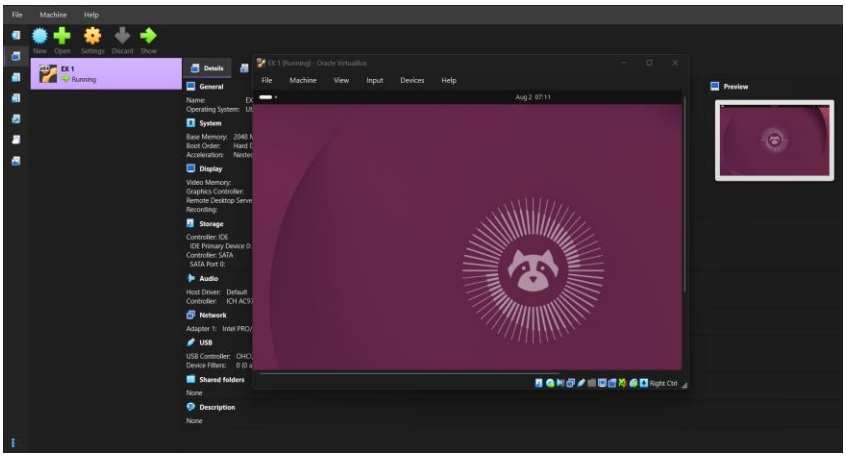

Allocate Memory (RAM): minimum 4096 MB (4GB). Create a Virtual Hard Disk: VDI format, Dynamically allocated, minimum 25GB. Click Finish.

Step 4: Mount the ISO and Boot

- Select the VM -> Settings -> Storage.
- Click the empty optical drive icon and choose the downloaded Ubuntu .iso file.
- Click "Start" to boot the VM.

Step 5: Install Ubuntu

Follow the on-screen Ubuntu installer. Select "Install Ubuntu", choose keyboard layout, and wait for the installation to complete. Restart the VM when prompted.

Result

Thus, Oracle VM VirtualBox was successfully installed and a virtual machine running Ubuntu was created and booted.
